

## Water, Water Everywhere...

(Curriculum Topic: Geography KS2 Rivers and mountains  
Science KS2 the water Cycle)

Water, water everywhere is split into two halves. The first half of the day focuses on water on Earth, the water cycle and rivers and oceans. The afternoon looks at human use and abuse of water covering drought around the world. (The afternoon session requires use of iPads or white board and the internet for research purposes)

During the day we will:

- Find out exactly how much fresh water we have available to all living things on Earth
- Make a miniature planet Earth to illustrate the water cycle
- Create a real river that flows from source to sea
- Find out how important clean water is to us and every other living thing we share this planet with
- Experience the hardships of living in a drought ravished country

At the end of the day children will:

- Have learnt the importance of fresh water
- Identify where on Earth water is located
- Have an understanding of drought and drought stricken countries
- Be able to compare and locate wet and dry countries in the world
- Have a good understanding of the water cycle and the changing states of water

Grow will supply all materials. Please inform us of your school ground facilities when booking this day.

Fee £220

(This topic is also offered in more detail as a term long project.
